

What is your Organisation's plan for the Nidd for the next 5 years (and Beyond)

Working through projects to:

- Increase our understanding of the Nidd and the factors that impact on its health
- Reduce pollution
- Increase the connection between the Nidd and its catchment
- Increase the biodiversity of the river – wetlands, river habitat improvements
- Control Invasive Non Native Species (INNS) and reduce their spread
- Share our understanding
- Help others to see the Nidd as the beautiful catchment that it is and to value having it in their lives

Healthy Rivers, Abundant wildlife,
valued by communities

What in your view are the key knowledge gaps or other constraints that limit your actions to improve the health of the Nidd?

- Full understanding of the Nidd and what it interacts with in the catchment
- As water flows so water quality fluctuates – makes tackling diffuse pollution very hard, it is a continuous job
- So many variables in place – hard to interpret
- Linkage – all trying to good – closer working needed to link it all together - Partnership

What do you think that people in this room can do to work with other stakeholders to improve the Nidd

- Make your own connection with the river - get to know your local section of the river, when it doesn't look like right, report it
- Get involved as an advocate – tell people about the river, recognise it as part of your life, respond to consultations
- Volunteer – come and work with us.

Healthy Rivers, Abundant wildlife,
valued by communities
